+1 (403) 827-9530 | [mikiawhitehead@gmail.com](mailto:mikiawhitehead@gmail.com) | [linkedin.com/in/mikiawhitehead/](https://linkedin.com/in/mikiawhitehead/)

## SUMMARY

---

Data and analytics engineer with a technical foundation in SQL, DAX, and Power Query, focused on scalable dataset architecture and semantic modeling within Power BI and Microsoft Fabric environments. Builds reusable, production-grade data pipelines and BI solutions that prioritize long-term data integrity and performance over short-term fixes. Experienced translating business requirements into robust technical structures across cross-functional analytics initiatives.

## EDUCATION

---

### University of British Columbia

2025

BASc, Electrical Engineering (Specializing in Software Engineering)

**Courses:** Machine Learning, Deep Learning and AI, Entrepreneurship, Economics, Control Systems, Power Electronics

## TECHNICAL SKILLS

---

**Coding Languages:** DAX, SQL, Python, PowerQuery M, C, Verilog, ARM Assembly, VHDL, C++, Java, 8051

**Software Programs:** Power BI, Power Platform, DevOps, Databricks, SSMS, Snowflake, DAXStudio, Denodo, VSCode, Excel, Jira, Frostbite

## EXPERIENCE

---

### Tourmaline Oil Corp. - Calgary, AB

May 2024 - Present

Data Analyst (*Functional Data Governance and BI Lead*)

- Delivered standardized datasets and analytics solutions as first point of contact for 4 business units, improving reporting accuracy and finance tracking, and **decreasing refresh times by 90%**
- Built an AI-assisted documentation workflow using Claude integrated with Power BI project files, **cutting dataset documentation time** from at least 5 hours to under 30 minutes
- Identified that the Closure team's existing Power Apps solution could not scale with growing data demands, and pitched and **secured buy-in for a COTS replacement**, evaluating WellView/SiteView capabilities to strengthen master data sources of truth, with a roadmap toward end-to-end data integration across business units for full well-lifecycle analysis
- Co-led development of an **enterprise dataset strategy**, standardizing data source rules and semantic model design across all data teams, reducing design time and ownership ambiguity
- Spearheaded the design of a cross-functional Power Platform governance model and RACI framework, clarifying ownership across the business and ITS and **reducing decision bottlenecks** and implementing design standards
- Built a SharePoint site centralizing ownership, developer, data definitions, and usage information across all Power BI reports, **improving data literacy** and report discoverability org-wide
- Founded and hosted recurring working sessions for 40+ members across ITS Data Architecture and Data Analysis leadership, **resolving friction between teams** and establishing a joint decision process that reduced siloed work
- Trained and mentored data analyst interns on Power BI best practices and data modeling standards, including **direct oversight and mentorship** of one intern's technical and career development

### Veren Inc. (formerly Crescent Point Energy) - Calgary, AB

Digital Engineering Analyst

Sep 2024 - April 2025

- Led training sessions for junior team members on data best practices, database management, and analytics workflows while working during the final year of university
- Co-developed a machine learning model to assess forecast accuracy by analyzing historical production data, improving predictive modeling and decision-making
- Designed and implemented a KPI monitoring application leveraging real-time data pipelines to track failure rates, enabling predictive insights that reduced pipeline integrity failures by 30% over two years

- 1 of 35 interns to receive a full-time return offer, recognized for strong technical expertise, problem-solving, and collaboration in data-driven projects
- Led a company-wide initiative to standardize Power BI data models and reports, improving data consistency, reliability, and accessibility while implementing best practices in data modeling and visualization
- Developed and optimized data solutions within the Microsoft Fabric environment, leveraging pipelines, data lakes, and SQL Servers to support various business units.
- Engineered automated data workflows, reducing manual effort by 2+ hours per day by optimizing workflows while easing users in change management

**Electronic Arts (EA Sports) - Vancouver, BC**

May 2021 - Aug 2021

## Development Support Engineering Intern

- Achieved proficiencies in using advanced testing software (Frostbite game engine, Perforce, and Jira) in a variety of console environments (Stadia, iOS/Android, Nintendo Switch, PS4, PS5, XB1, XBOX)
- Mentored and assisted team members with testing strategies, troubleshooting, and bug documentation, improving overall efficiency and product quality
- Conducted detailed testing on 1,000+ kits, achieving the highest bug detection rate (20%) among peers and contributing to QA process improvements, project planning, and the development of new QA strategies

**EVRAZ North America - Red Deer, AB**

May 2022 - Aug 2022

## Engineering Co-op Student, Operational Excellence

- Conducted extensive analysis of the pipeline manufacturing processes to identify bottlenecks in the field and communicate these issues to the engineering and business strategy team
- Successfully identified a key constriction in the casing pipe production lines and proposed a solution which would speed up the cycle time by 55%, while aiding in change management and easing operators' concerns

## OTHER WORK EXPERIENCE

---

**Youth Coach**, Youthfully (Remote) – Sep 2026 to Present**Math and Science High School Tutor**, Self-Employed (Calgary, AB) – Jan 2020 to Aug 2021**Piano Teacher**, Self-Employed (Calgary, AB) – Jun 2018 to Aug 2021

## PROJECTS

---

**UNIFY** | *New Venture Design Capstone, UBC*

Sep 2024 – Apr 2025

- Co-founded and led a team of 6 to develop a full-stack web platform to consolidate Canadian university admissions data, personalized program matching, and application tracking for high school students, built on a React/Next.js frontend and Firebase backend deployed on Vercel
- Led UI/UX design across three design iterations in Figma, translating direct user feedback from 10+ students into a refined product interface
- Validated product-market fit through user interviews, surveys, and live demo events; achieved 93% of surveyed users willing to recommend the platform and 100% reporting at least one valuable feature
- Co-developed business strategy for a 6-person venture, including revenue model, IP strategy, and freedom-to-operate analysis.

## PROFESSIONAL AFFILIATIONS AND INDUSTRY TRAINING

---

**Engineer-in-Training (EIT)**, APEGA**H2S Alive Certification****Member**, Calgary Women in Energy

## COMMUNITY ENGAGEMENT

---

**Math Tutor Team Lead**, Calgary Public Library – Sep 2025 to Oct 2025**Social Media Engagement Coordinator**, UBC Chinese Students' Association – Sep 2024 to Apr 2025**President**, World Vision UBC – Aug 2022 to Apr 2024**Operations and Logistics Lead**, Engineers Without Borders (EWB) UBC – Jan 2022 to Jan 2023
